

AAPG BULLETIN
INDEX OF VOLUME 66 (1982)

The format of the 1982 *Bulletin* Index consists of only *one* index of titles, authors, and keywords. The 1982 reviews of recent publications are included for the fourth time in our computer indexing (which began in 1965). The memorials are now included, starting with this issue.

The left-hand columns are: B = *Bulletin*; 6601 = volume 66, no. 1, etc; and the page numbers. Code symbols used are:

- † = phrase from title of an article.
- * = phrase from an abstract title.

This index does not show multiple authors in any single listing. Each author is listed separately.

Note: Only single-line entries are used; the line is terminated after the last full word. Where title entry is inverted, a comma appears before each keyword in that entry.
